

JUNE WINNER

70 Red Buckets of Surprises!

“ Madtree was a project that I had been working on for over a year. I have a close relationship with the Owner. I had recommended that they use Carboline/ Flowcrete for the Urethane Concrete floor system in their brewery.

Flowfresh SR and Sanitile 985 PA were selected as the finished system. The project was 16,000 square feet at ¼ inch. We installed this portion of the project within 2 weeks from start to finish juggling the schedule of all the trades around us. It involved long days and Jason Hopping was there to support us throughout the process.

This project will actually be a feature story for Coatings Pro Magazine! ”
